Art Unit: 1724

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 25-29, 31, 33, 34 and 37-41 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by WO 96/40857. The reference discloses (see Figs. 20B and 20C; and page 15, lines 22-30) a fluid processing set for use in photoactivation treatment of a biological fluid, which processing set includes a plurality of containers connected together with openable flow paths. This reference further teaches that the first container is made of a material which is translucent to light in the photoactivating wavelength range (see page 84, lines 10-11); and also teaches providing an adsorbent material for removing excess photochemical agent and photoactivation by-products from the biological fluid (see page 84, lines 15-20). This reference also disclosed that the adsorbent could be housing in a separate treatment container (see page 75, lines 4-6) as required by claim 28, or within a semipermeable pouch in the storage container (see page 84, lines 3-4; and page 201, lines 12-14) as required by claim 29. This reference further teaches providing the disclosed containers with a light impermeable (e.g. foil) overwrap (see page 97, line 14) as required by claims 37 and 38; and also teaches providing a holder (i.e. housing 100) for the disclosed containers (see Fig. 1; and page 115, line 12) as required by claims 40 and 41.

Applicant's arguments filed October 14, 2003, 2003 have been noted and carefully considered, but no longer appear to be relevant in view of the new grounds of rejection.
